

Wind Multiplikator
experience for offshore solutions

Wind Multiplikator, OWS and Eunda Partnership

Bremen/Germany, 06 April 2022

Wind Multiplikator GmbH (WM), OWS Off-Shore Wind Solutions GmbH (OWS) and E+A Elektrotechnik und Aggregatebau Betriebsgesellschaft mbH (Eunda), are pleased to announce they have entered into global partnership to bring together Wind Multiplikator's utility like operational management expertise, OWS' offshore wind experience, facilities in Emden, Germany and Eunda's considerable experience in repair of generators and electric engines, to deliver a supply of new and repaired generators to the offshore wind market and to advise our customers.

The partnership will enhance the full-service concept we are offering to the offshore wind market. We will now start working to introduce a “pooling concept” of Generators for Wind Turbines which will bring down the capex costs, lead time and the warranty risks for our clients, in times of supply restraints.

The partnership brings together three companies with significant experience from the offshore wind industry and who's employees have been part of the offshore wind journey from its initiation. The partnership is intended to optimise the service offering these companies and limit operational and financial risks for our customers.

Michael Munder-Oschimek MD of OWS stated “we have experience in repairing major components and this partnership will strengthen this and add product access and reliability to our clients”

Nils-R. Vetter MD of Wind Multiplikator stated “we are very excited to be working together with OWS and Eunda to support the offshore wind industry with optimised operational solutions leaving our clients with better performing wind turbines and less inherent risk”.

Torsten Campen MD of EundA stated “this partnership will enhance our service offering and market reach and improve risk mitigation for our client’s.

Wind Multiplikator is a project and operational management company, specialising in operational optimisation, supporting costumers in the development, construction & operations phases of offshore wind farms. (<http://windmultiplikator.de/>)

OWS is an on and offshore wind service provider, who covers all life cycles of a wind turbine. Our wide range of services includes the construction and commissioning of wind farms as well as their maintenance, repair and implementation of refit. (<http://www.offshore-wind-solutions.de/>)

EundA is a company offering solutions and service for the repair of electric motors and generators independent on make and brand with expert knowledge from on and offshore wind turbines. (<https://www.eunda.de/en/home>)
